

AUTHOR is a browser-based and highly scalable learning content management system powered by Eedo ForceTen, which allows you to manage learning content for both online and classroom formats.

AUTHOR is designed to enable business users to truly involve employees in the acquisition and application of knowledge to perform every task to standard—It lets you create and manage your own content. Trainers, policy experts, business process designers, and subject matter experts can create custom and interactive learning experiences and task-oriented blended content and link them to each task in TRACCESS PERFORM. And with TRACCESS, you can create all of your own learning content in AUTHOR or you can create as much or as little as you need and link to any other 3rd party resources.

Standards compliance and interoperability

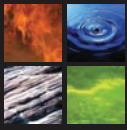

AUTHOR supports all of the document standards and version control that would be expected of controlled documents. AUTHOR is SCORM 1.2 and SCORM 2004 CERTIFIED, AICC, PENS and Section 508 compliant and supports QTI 1.2 and QTI 2.0.

Content authoring and management

- author comprehensive training modules for online or classroom
- create content with easy-to-use wizard
- import metatags and re-use legacy learning content in various formats including PowerPoint, Dreamweaver and Toolbook
- create question templates for rapid re-creation (no need to be a “Web expert”)
- access powerful taxonomy tool
- access user-friendly page builder tool
- quickly develop content with drag and drop feature
- generate SCORM1.2 or SCORM 2004 compliant content for exporting
- author by re-using common elements
- integrate design and development with Storyboard feature
- view content on a PDA
- use built-in work flow tools
- author via a Web-browser, with no need for plug-ins

Reporting

- create custom reports on data collected from assessments, surveys and developer activity
- export customizable report types to Microsoft Excel

Reporting

- Hotspot interactions
- Drag and drop and matching exercises
- Remediation review
- Branching
- Scenarios and simulation

Customization

- create and access prescriptive learning forum, where learners review subjects areas in which they tested poorly
- create and collect custom learner feedback surveys
- import QTI question types from other systems
- customize your user portal to meet your needs
- set language preference (log on in any available language without having to change your settings)

Security and access control

- define granular security access from groups down to users
- grant a variety of access options
- use password policy tab to manage passwords
- set runtime authentication questions at intervals

Content management, transfer and delivery

- easily distribute content to a portal, web site or LMS
- take courses offline and sync them once reconnected
- use the search tool to quickly navigate a knowledge base of content
- create a custom list of knowledge sharing objects
- distribute user-specific content to close performance gaps

Evaluations/ assessments

- set publishing standards
- collect user feedback using surveys
- catalog information
- manage version control for procedures and documents with revision capability
- easily distribute content to a portal, Web site or competency management system (CMS)
- view content on a PDA
- ensure security with policy-driven access
