

## Petroleum Industry Accounting

### MODULE

#### About the Skill Module

This skill module explores the difference between accounting and economics – and there is a world of difference. Oil and gas companies need both accountants and economists to run their businesses and they serve different functions within a company. But even beyond serving different functions they speak different languages and live in different worlds. In this skill module, we gain an appreciation for accounting terms, methodology and, most importantly, clarify the differences between accounting and economics.
